# **1. INTRODUCTION**

## **1.1 Project Overview**

Food is essential for human life and has been the concern of many healthcare conventions. Nowadays new dietary assessment and nutrition analysis tools enable more opportunities to help people understand their daily eating habits, exploring nutrition patterns and maintain a healthy diet. Nutritional analysis is the process of determining the nutritional content of food. It is a vital part of analytical chemistry that provides information about the chemical composition, processing, quality control and contamination of food.

## **1.2 Purpose**

The main aim of the project is to building a model which is used for classifying the fruit depends on the different characteristics like colour, shape, texture etc. Here the user can capture the images of different fruits and then the image will be sent the trained model. The model analyses the image and detect the nutrition based on the fruits like (Sugar, Fibre, Protein, Calories, etc.).

## 2. LITERATURE SURVEY

<b>1.Paper title</b>	“Approximate Estimation of the Nutritions of Consumed Food by Deep Learning” by İbrahim Berkan Aydılek Published in 2017 International Conference on Computer Science and Engineering (UBMK), IEEE, 2017.
<b>Problem definition</b>	<ul style="list-style-type: none"><li>• Controlled intake of nutrition is recommended as a condition for being a healthy individual. Knowing and monitoring how much food is consumed during the day, following the calorie and nutrition of these foods helps to control healthy nutrition.</li><li>• In this study, an attempt was made to approximate the nutrition of the food at the image level using the Food-pictures dataset that contain nutrient images.</li></ul>
<b>Methodology/ Algorithm</b>	<ul style="list-style-type: none"><li>• Convolutional Neural Network (CNN)</li><li>• Artificial Intelligence</li><li>• Deep Neural Network</li><li>• Image Classification</li></ul>
<b>Advantages</b>	<ul style="list-style-type: none"><li>• Convolutional Neural Networks (CNN), a deep learning approach that has been used successfully in image recognition and classification tasks, has been trained with nutrition image training data.</li><li>• A high classification success value has been achieved.</li></ul>

<b>Disadvantages</b>	<ul style="list-style-type: none"> <li>• It is extremely expensive to train due to complex data models.</li> <li>• Moreover deep learning requires expensive GUIs and hundreds of machines. This increases the cost to the users.</li> </ul>
----------------------	--

<b>2. PAPER TITLE</b>	<p>“Validation of a deep learning system for the full automation of bite and meal duration analysis of experimental meal videos”  D Konstantinidis, K Dimitropoulos, B Langlet, P Daras... -  Nutrients, 2020</p>
<b>PROBLEM DEFINITION</b>	<p>Eating behavior can have an important effect on, and be correlated with, obesity and eating disorders.  To remedy the latter a novel “Rapid Automatic Bite Detection” (RABiD) algorithm that extracts and processes skeletal features from videos was trained in a video meal dataset (59 individuals; 85 meals; three different foods) to automatically measure meal duration</p>
<b>METHODOLOGY/ ALGORITHM</b>	<p>Deep learning  LSTM – long Short Term Memory  Convolutional Neural Network (CNN)  Max Pooling</p>
<b>ADVANTAGES</b>	<p>On a methodological level, RABiD offers a valid, fully automatic alternative to human meal-video annotations for the experimental analysis of human eating behavior,  at a fraction of the cost and the required time, without any loss of information and data fidelity  Self-rated methodologies, which are predominantly used for estimating eating behavior, being cost effective and easy to analyze, rely heavily on the participant’s input</p>

**DISADVANTAGES**

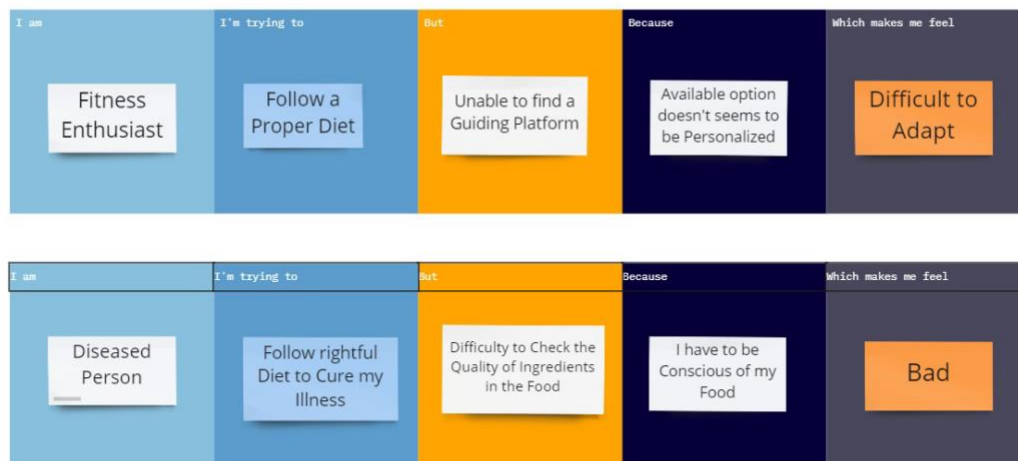

This methodology is still limited [15] by its dependency on time-consuming and error-prone manual video annotations, with many studies resorting to the use of multiple human annotators.  
Often suffers from reliability issues.

3.PAPER TITLE	“AI Nutrition Recommender System” by Thamos Theodoridis, Vassilios Solachidis, Kosmos Dimitropoulos, Lazaros Gymnopoulos and Petros Daras in the 12th Pervasive Technologies Related to Assistive Environments Conference
PROBLEM DEFINITION	The consumption of a wide variety of food items is necessary in order for the human body to obtain the right amounts of nutrients. Failing to follow such a well- balanced diet, in combination with a generally unhealthyway of living, has been shown to increase the risk for cardiovascular disease, type II diabetes and some forms of cancer. Taking all these factors into consideration, food intake monitoring can provide substantial benefits in certain cases.
METHODOLOGY/ ALGORITHM	Machine learning Food category Recogniser Object Vision Convolutional Neural Network(CNN) Computer Vision Information Retrieval
ADVANTAGES	AI and its various subsets have been leveraged by these platforms to identify the calorie intake and also to makefood recommendations for a healthy diet. In most cases,what we see is that these platforms act as a data repository where while providing real-time information to its users, it also makes available to numerous clients who work in this field for a determined rate.
DISADVANTAGES	In order to make recommendations, the system needs tocollect nutritional needs from users. Most of the information is only provided through continuous interactions with users. However, in reality, recording nutritional intake from users cannot avoid faults because users usually forget or give wrong information about the foods they have consumed .

## 2.3 Problem Statement Definition

### 3.1 Empathy Map Canvas

## Empathy map

TAKE NUTRITION  
INTO YOUR OWN  
HANDS 

VELVIZHI  
MADHUMITHA  
NARMADA  
SELVA SOWBAKYA

## Build empathy

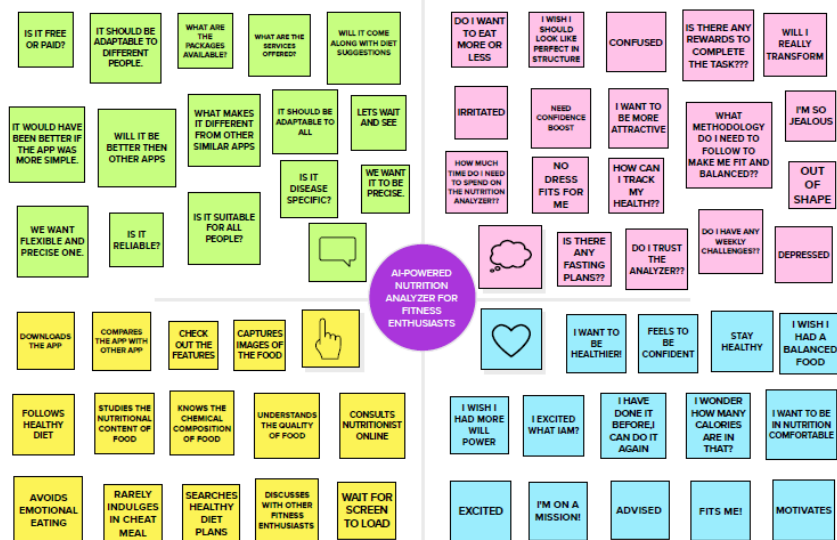

Nutritional analyser does the process of determining the nutritional content of food that provides information about the chemical composition, processing, quality control and contamination of food.

**Says**

What have we heard them say? What can we imagine them saying?

## Thinks

What are their wants, needs, hopes, and dreams? What other thoughts might influence their behavior?

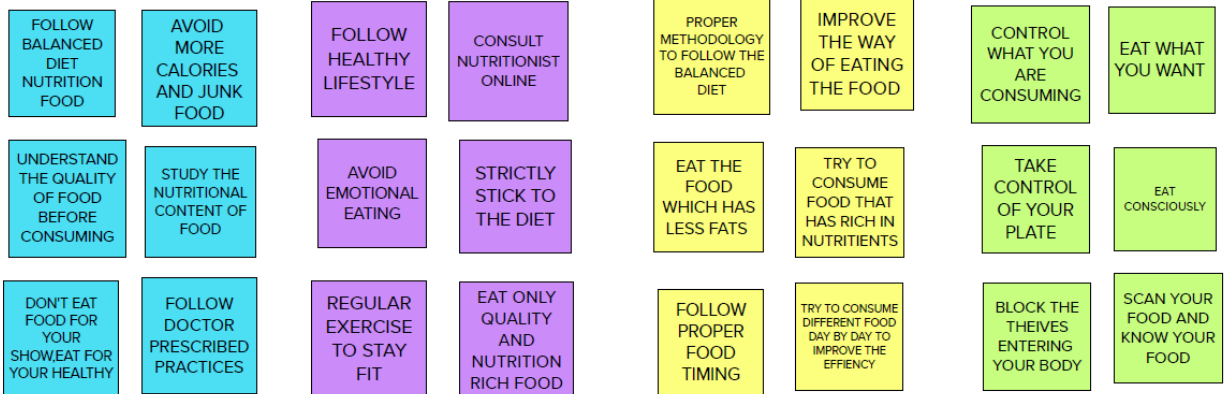

**Does**

What behavior have we observed?  
What can we imagine them doing?

## Feels

What are their fears, frustrations, and anxieties? What other feelings might influence their behavior?

## 3.2 Ideation & Brainstorming

3

## Group ideas

Take turns sharing your ideas while clustering similar or related notes as you go. Once all sticky notes have been grouped, give each cluster a sentence-like label. If a cluster is bigger than six sticky notes, try and see if you can break it up into smaller sub-groups.

🕒 20 minutes

### TIP

Add customizable tags to sticky notes to make it easier to find, browse, organize, and categorize important ideas as themes within your mural.

## USING ARTIFICIAL INTELLIGENCE

## Prioritize

Your team should all be on the same page about what's important moving forward. Place your ideas on this grid to determine which ideas are important and which are feasible.

⌚ 20 minutes

### 3.3 Proposed Solution

S.No.	Parameter	Description
1.	Problem Statement	<p>Food is essential for human life and has been the concern of many healthcare conventions.</p> <p>Nowadays new dietary assessment and nutrition analysis tools enable more opportunities to help people understand their daily eating habits, exploring nutrition patterns and maintain a healthy diet. Nutritional analysis is the process of determining the nutritional content of food. It is a vital part of analytical chemistry that provides information about the chemical composition, processing, quality control and contamination of food.</p>
2.	Idea / Solution description	<p>The main aim of the project is to building a model which is used for classifying the fruit depends on the different characteristics like colour, shape, texture etc. Here the user can capture the images of different fruits and then the image will be sent the trained model. The model analyses the image and detect the nutrition based on the fruits like (Sugar, Fibre, Protein, Calories, etc.).</p>

3. Novelty / Uniqueness	Regional or zonal based prediction of rainfall, which would be helpful to farmer communities of different places having varied crop cultivation. Various ML models [in-built, hybrid or ensemble methods] would be applied to the datasets and chosen to make predictions based on their accuracy, reliability, and sustainability.
4. Social Impact / Customer Satisfaction	This application would help the users to maintain an overall balance between demand and supply of agricultural stocks while the farmers can take decisions for cropping, harvesting, and efficient use of the water resources. It would reduce the losses and prevent the farmers from attempting suicide, providing an improved quality of life.
5. Business Model (Revenue Model)	Correct and accurate predictions from the built model would fetch adequate profits for the respective users and user sectors. As the economy of India Is largely dependent on the primary sector especially agriculture and its allied activities, the model is useful to other departments like tea plantations, tourism, metrological dept. etc. Govt. aid and open-source datasets would allow the farmers and other users to avail the product in low or no charges.

## 6. Scalability of the Solution

Effective analysis and prediction will assist not only farmers and other people associated with agriculture in tracking the effect of rainfall on their crops and harvests, but also people in all sectors [government ministry, news agencies, vegetable or crop sellers, common citizens] in using our product or tool for their daily needs. Any feature or module could easily be included into the application to expand the user functionalities.

## 3.4 Problem Solution fit

Problem-Solution fit canvas 2.0		Purpose / Vision To choose a right college based on scores		PROJECT TITLE: AI-POWERED NUTRITION ANALYZER FOR FITNESS ENTHUSIASTS TEAM ID: PNT2022TMD01196	
Define CS, fit into	<b>1. CUSTOMER SEGMENT(S)</b> Who is your customer?  <b>CS</b> <b>Consults on Nutrition</b>	<b>6. CUSTOMER</b> What constraints prevent your customers from taking action or limit their choices of solutions? i.e. spending power, budget, no cash, network connection, available devices.  <b>CC</b> <b>Lack of knowledge on understanding everything and go beyond the calorie counting, scared on getting help from the resources on analyser, whether the premium amount for the analyzer is acceptable by the customer.</b>	<b>5. AVAILABLE SOLUTIONS</b> Which solutions are available to the customers when they face the problem or need to get the job done? What have they tried in the past? What pros & cons do these solutions have? i.e. pen and paper is an alternative to digital networking.  <b>AS</b> <b>They can hire a personal Nutritionist. They can consult dietitians. They can use apps. There are many apps like My Fitness Pal, Chronometer, Life sum, etc..... which people resort to for good health.</b>	Explore AS.	
	<b>2. JOBS-TO-BE-DONE / PROBLEMS</b> Which jobs-to-be-done (or problems) do you address for your customer? There could be more than one, explore different sides.  <b>J&amp;P</b> <b>Healthy diet plan, Quality control of food, Nutrition rich food recommendations, Different nutrition pattern exploration, Nutritional analysis, Classification of food based on its nutrients.</b>	<b>9. PROBLEM ROOT CAUSE</b> What is the real reason that this problem exists? What is the back story behind the need to do this job? i.e. customers have to do it because of the change in regulations.  <b>RC</b> <b>Due to fast paced lifestyle, Availability of low quality and nutrition less food, Improper diet plan, Lack of health related awareness, Emotional eating, not following strict food timings.</b>	<b>7. BEHAVIOUR</b> What does your customer do to address the problem and get the job done? i.e. directly related: find the right voter panel installer, calculate usage and benefits; indirectly associated: customers spend free time on volunteering work (i.e. Greenpeace)  <b>BE</b> <b>Consulting Doctors or Nutritionist, Enquiries about the food to be consumes, Refer articles such as Magazine, Newspaper, Watching Exercises and Yoga and do it, Searching in Websites etc.....</b>		
<b>3. TRIGGERS</b> What triggers customers to act? i.e. seeing their neighbour installing solar panels, reading about a more efficient solution in the news.  <b>TR</b> <b>To maintain good health and to regulate their eating and good intake of foods.</b>	<b>10. YOUR SOLUTION</b> If you are working on an existing business, write down your current solution first, fill in the canvas, and check how much it fits reality. If you are working on a new business proposition, then keep it blank until you fill in the canvas and come up with a solution that fits within customer limitations, solves a problem and matches customer behaviour.  <b>SL</b> <b>Food has the power to influence metabolism and health directly. If food is the reason, Nutrition is the result. Hence we should give high importance to proper nutrition. Our project "AI powered Nutrition Analyzer" helps people to get to know the nutrition content in their food and improve body health.</b>	<b>8. CHANNELS of BEHAVIOUR</b> 8.1 ONLINE What kind of actions do customers take online? Extract online channels from #7  <b>CH</b> <b>Referring Articles, Checking Websites related on nutrition, consulting nutritionist on Online, etc.....</b>  8.2 OFFLINE What kind of actions do customers take offline? Extract offline channels from #7 and use them for customer development  <b>Consulting Doctors, Enquiries about the food to be consumes, Eating Balanced food, Doing Exercises and Yoga etc.....</b>	Extract online & offline CH of BE		
<b>4. EMOTIONS: BEFORE / AFTER</b> How do customers feel when they face a problem or a job and afterwards? i.e. lost, insecure > confident, in control - use it in your communication strategy & design.  <b>EM</b> <b>Before Depressed, Exhausted, Confused, Tense on body shape After: Confidence, delighted, encouraged, motivated, customer became mentally and physically fit.</b>					

## 4. REQUIREMENT ANALYSIS

### 4.1 Functional requirement

FR No.	Functional Requirement [Epic]	Sub-Requirement [Story / Sub-Task]
FR -1	User Registration	<ul style="list-style-type: none"><li>-Registration through Gmail</li><li>-Registration through Mobile Number</li><li>-Registration through Face-book</li></ul>
FR -2	User Confirmation	Confirmation via Email or OTP
FR -3	User Login	Using the registered email ID and password as login credentials
FR - 4	User Requirements	-The user simply inputs your recipe ingredients and amounts. The software will instantly produce an accurate readout of your dish in terms of nutritional analysis in a readable format that consumers are familiar with.

		-With already given details the system can alert the consumer if any content of their allergies ,it can alert the consumer
--	--	--

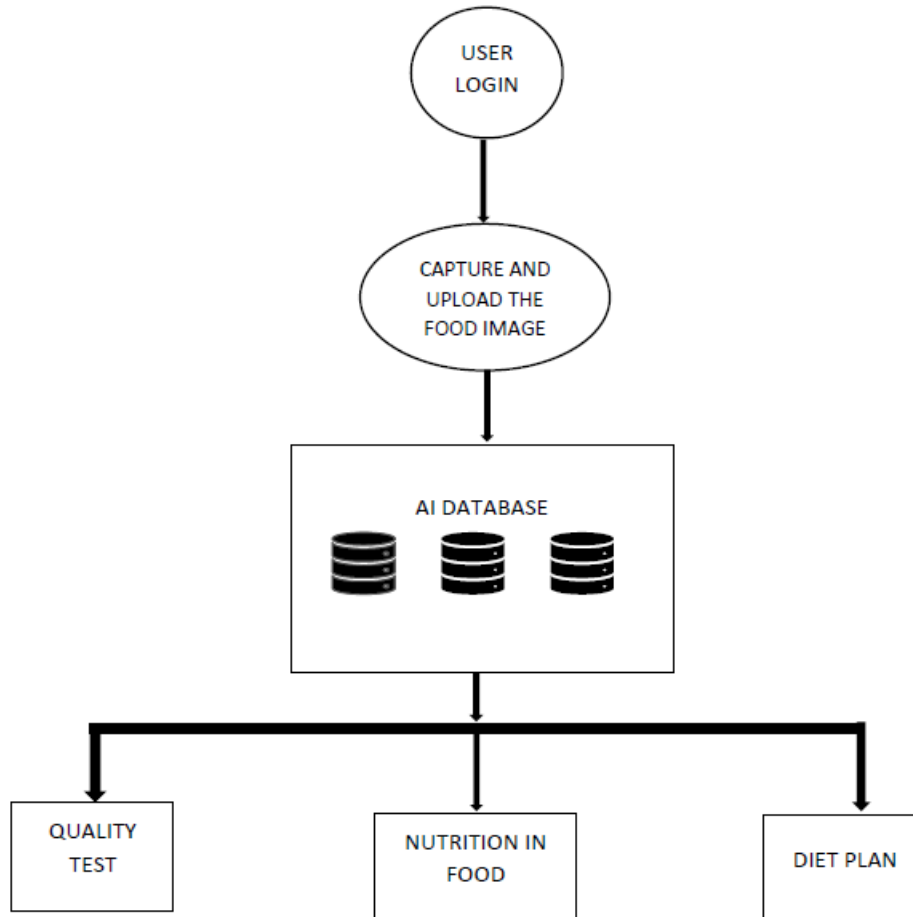

## 4.2 Non-Functional requirements

FR No.	Non-Functional Requirement	Description
NFR -1	Usability	<ul style="list-style-type: none"> <li>• The system should administer a quality attribute that assesses how easy user interfaces are to use</li> <li>• The system doesn't expect any technical prerequisites from the user's side</li> </ul>
NFR -2	Security	<ul style="list-style-type: none"> <li>• User details and login credentials should be safe and secure</li> <li>• The confirmation of a valid user is required for authentication</li> </ul>
NFR -3	Reliability	<ul style="list-style-type: none"> <li>• Portable and cross-platform independent</li> <li>• The application should be subjected to an experiment, test, or measuring procedure</li> </ul>

		that yields the same results on repeated trials
NFR -4	Performance	<ul style="list-style-type: none"> <li>• The system should handle the traffic efficiently and service requests while consuming less bandwidth</li> <li>• The accuracy of the result of a measurement, calculation, or specification should be dependent the datasets</li> <li>• The page should not take a lot of time to load the contents and display them</li> </ul>
NFR -5	Availability	<ul style="list-style-type: none"> <li>• The version of the application should be available even at the time of maintenance and updating</li> <li>• The system should run 24 hours a day, 7 days a week [24/7 available]</li> </ul>
NFR -6	Scalability	<ul style="list-style-type: none"> <li>• The application should be in the way of adding new functionalities or modules without affecting the existing functionalities</li> <li>• The system should be able to manage numerous users at a time and be less prone to errors</li> </ul>

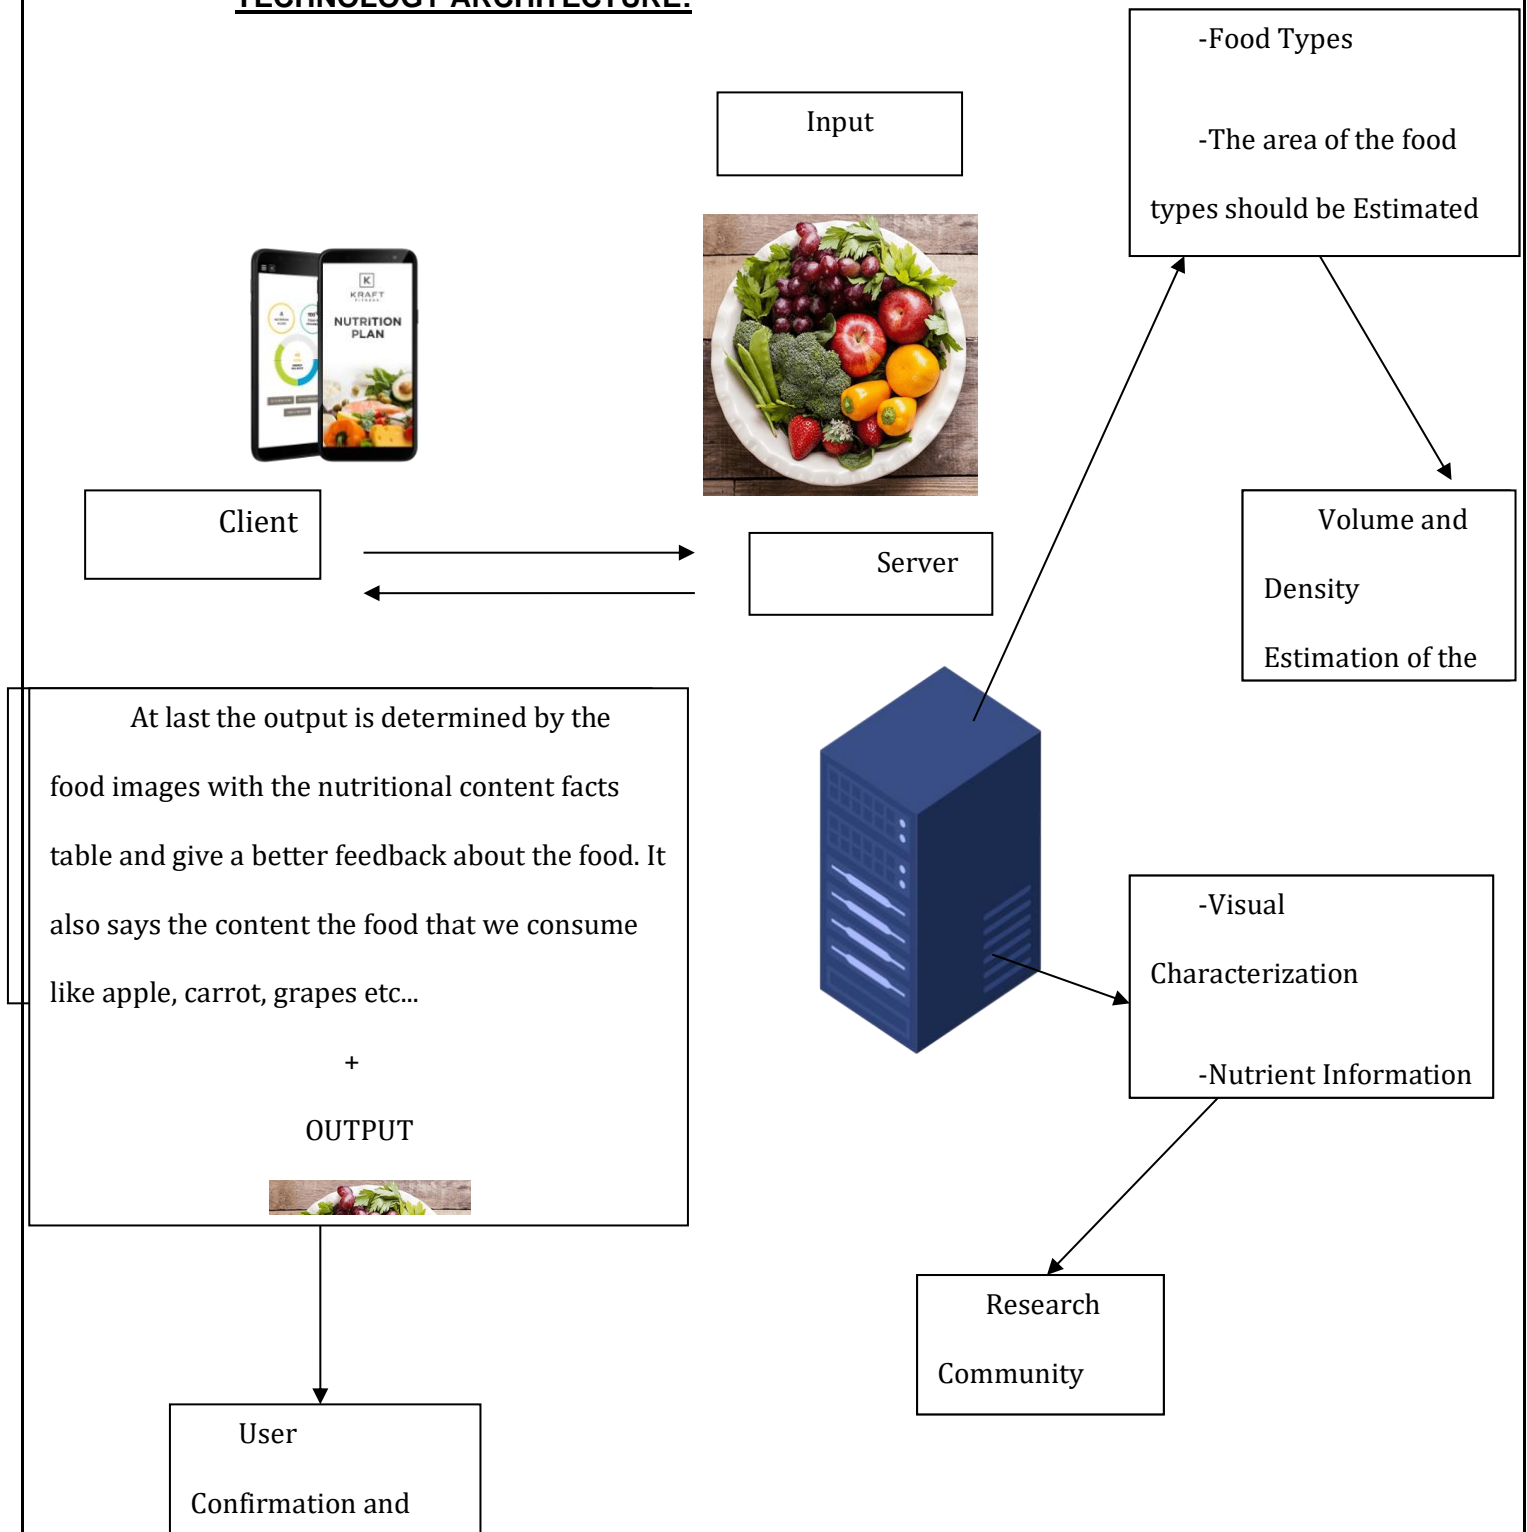

## 5. PROJECT DESIGN

### 5.1 Data Flow Diagrams

## 5.2 Solution & Technical Architecture

### TECHNOLOGY ARCHITECTURE:

## 5.3 User Stories

User Type	Functional Requirement (Epic)	User Story Number	User Story / Task	Acceptance criteria	Priority	Release
Customer (Mobile user)	Registration	USN-1	As a user, I can register for the application by Filling the form	I can receive confirmation via OTP	High	Sprint-1
		USN-2	As a user, I will receive confirmation email once I have registered for the application	I can receive confirmation email & click confirm	High	Sprint-1

## 6. PROJECT PLANNING & SCHEDULING

### 6.1 Sprint Planning & Estimation

Sprint	Functional Requirement (Epic)	User Story Number	User Story / Task	Story Points	Priority	Team Members
Sprint-1	<b>Data Collection &amp; Image Processing</b>					
Sprint-1		USN-1	Collect images of different food items organized into subdirectories based on their respective names	3	Medium	Keerthyogan
Sprint-1		USN-2	Import and configure the Image data generator library from Keras	3	Medium	Prasanth
Sprint-1		USN-3	Apply Image data generator functionality to training set and testing set	5	High	Pravek
Sprint-1		USN-4	Improving the image data that suppresses unwilling distortions or enhances some image features important for further processing	3	Medium	Priyadharsan

Sprint	Functional Requirement (Epic)	User Story Number	User Story / Task	Story Points	Priority	Team Members
Sprint-2	<b>Model Building &amp; Testing</b>					
Sprint-2		USN-5	Importing the model building libraries and Initializing the model	5	High	Keerthyogan
Sprint-2		USN-6	Adding CNN layers, Dense layers & other necessary layers and Compile the model	5	High	Prasanth
Sprint-2		USN-7	Train & Test the model based on the image dataset	3	Medium	Pravek
Sprint-3	<b>Application building</b>					
Sprint-3		USN-8	Create HTML pages to design the front-end part of the web page	5	High	Priyadharsan
Sprint-3		USN-9	Create the flask application and loading the model file	5	High	Keerthyogan
Sprint-3		USN-10	Routing to the HTML page and Running the application	5	High	Prasanth
Sprint-4	<b>Cloud integration</b>					
Sprint-4		USN-11	Train the model on Cloud	5		Priyadharsan, Pravek

Food is essential for human life and has been the concern of many healthcare conventions. Nowadays new dietary assessment and nutrition analysis tools enable more opportunities to help people understand their daily eating habits, exploring nutrition patterns and maintain a healthy diet. Nutritional analysis is the process of determining the nutritional content of food. It is a vital part of analytical chemistry that provides information about the chemical composition, processing, quality control and contamination of food. It ensures compliance with trade and food laws.

```
sugar_g:2.6 fiber_g:1.2 serving_size_g:100 sodium_mg:4 name:"apple" potassium_mg:23 fat_saturated_g:0  
fat_total_g:0.2 calories:18.2 cholesterol_mg:0 protein_g:0.9 carbohydrates_total_g:3.9
```

## 9. CONCLUSION

A nutrient analyzer was built for individual person according to their health condition .A nutrient must be intake in correct quantity for a good health.

## 10. FUTURE SCOPE

1. We will develop an App for gyming and for fitness enthusiast
2. For every individual a separate diet plan with a budget according to the individual.
